

# Numatic International Carbon Reduction Plan

June 2026

## Commitment to achieving Net Zero

Numatic International recognises that we cannot continue to produce top-class cleaning equipment without addressing the environmental impact of our products and operations, we, therefore, pledge that:

**Numatic International Ltd commits to achieve net-zero greenhouse gas emissions across the value chain by 2050.**

## Baseline Emissions Footprint

Baseline Year: 2024

In 2022 Numatic completed its first full carbon footprint assessment, including Scope 3. We have been reporting our Scope 1 and 2 emissions since 2019. Emissions are calculated using the GHG Reporting Protocol Corporate Standard and GHG Corporate Value Chain (Scope 3) Accounting and Reporting Standard. In 2025, we significantly improved our data collection systems and partnered with Normative to collect emissions data and submit targets to the Science Based Targets initiative (SBTi). We have reassessed our emissions from 2022 onwards using Normative, and so figures have changed since Issue 1 of this document. The emissions data detailed below represent Numatic’s UK operations only in line with PPN 006. For SBTi reporting purposes, we include emission data collected from our subsidiaries. 2024 has been selected as the base year as it represents the most complete, accurate, and robust dataset available, reflecting improved data collection systems and methodologies.

## Baseline Year Emissions

| Emissions 2024                     | Total tCO2e |
|------------------------------------|-------------|
| Scope 1                            | 2,565       |
| Scope 2 (Market-Based)             | 1,636       |
| Scope 2 (Location-Based)           | 2,118       |
| Scope 3 (Across all 15 Categories) | 248,718     |
| Total Emissions (Market-Based)     | 253,401     |

| Emissions 2025                     | Total tCO2e |
|------------------------------------|-------------|
| Scope 1                            | 2,543       |
| Scope 2 (Market-Based)             | 96.12       |
| Scope 2 (Location-Based)           | 1,723       |
| Scope 3 (Across all 15 Categories) | 228,809     |
| Total Emissions (Market-Based)     | 233,075     |

# Numatic International Carbon Reduction Plan

June 2026

## Emissions Reduction Targets

Numatic have set the following targets which were approved by the Science Based Targets initiative in January 2026.

### **Near-Term**

Numatic International Ltd commits to reduce absolute scope 1 and 2 GHG emissions 63.0% by 2035 from a 2024 base year. \* Numatic International Ltd also commits to reduce absolute scope 3 GHG emissions 63.0% within the same timeframe. \*

### **Long-Term**

Numatic International Ltd commits to reduce absolute scope 1 and 2 GHG emissions 90.0% by 2050 from a 2024 base year. \* Numatic International Ltd also commits to reduce absolute scope 3 GHG emissions 90.0% within the same timeframe. \*

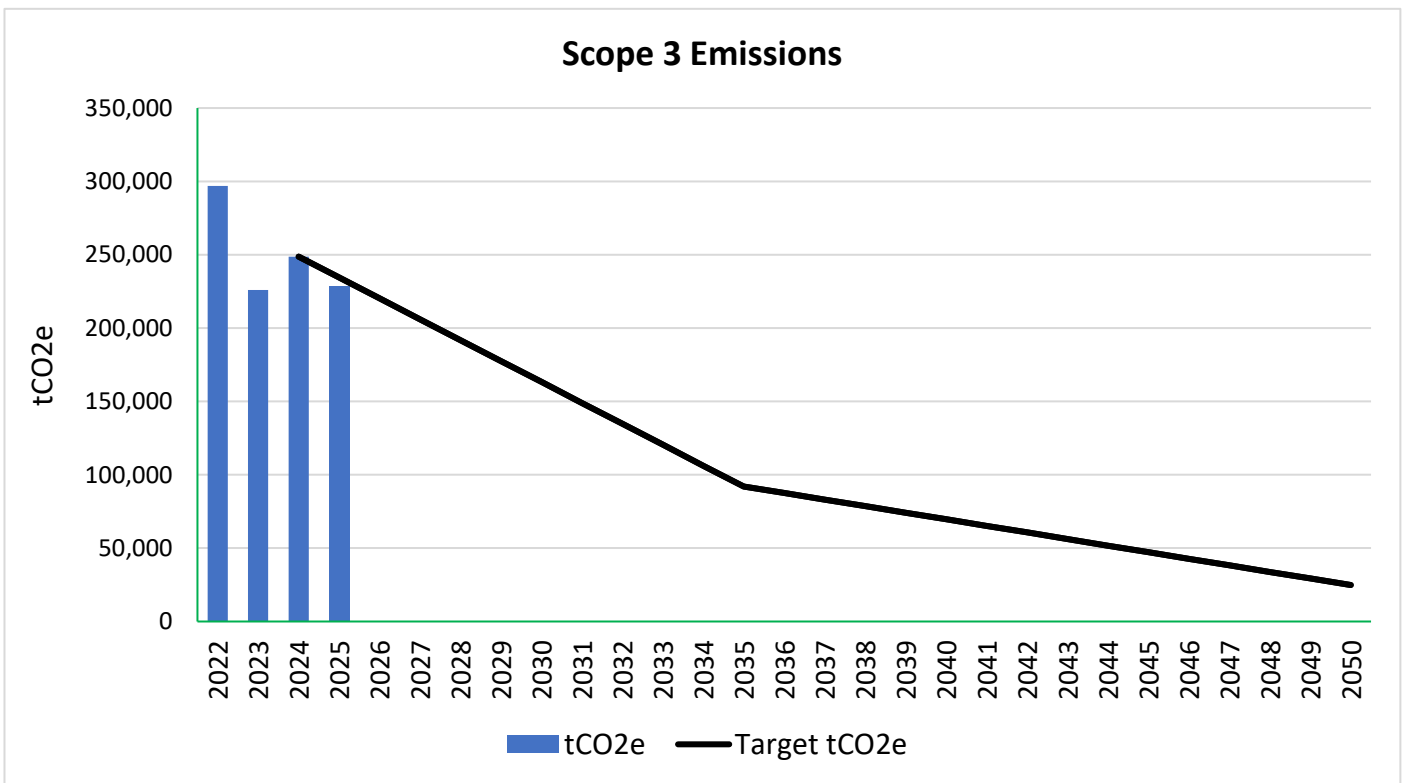

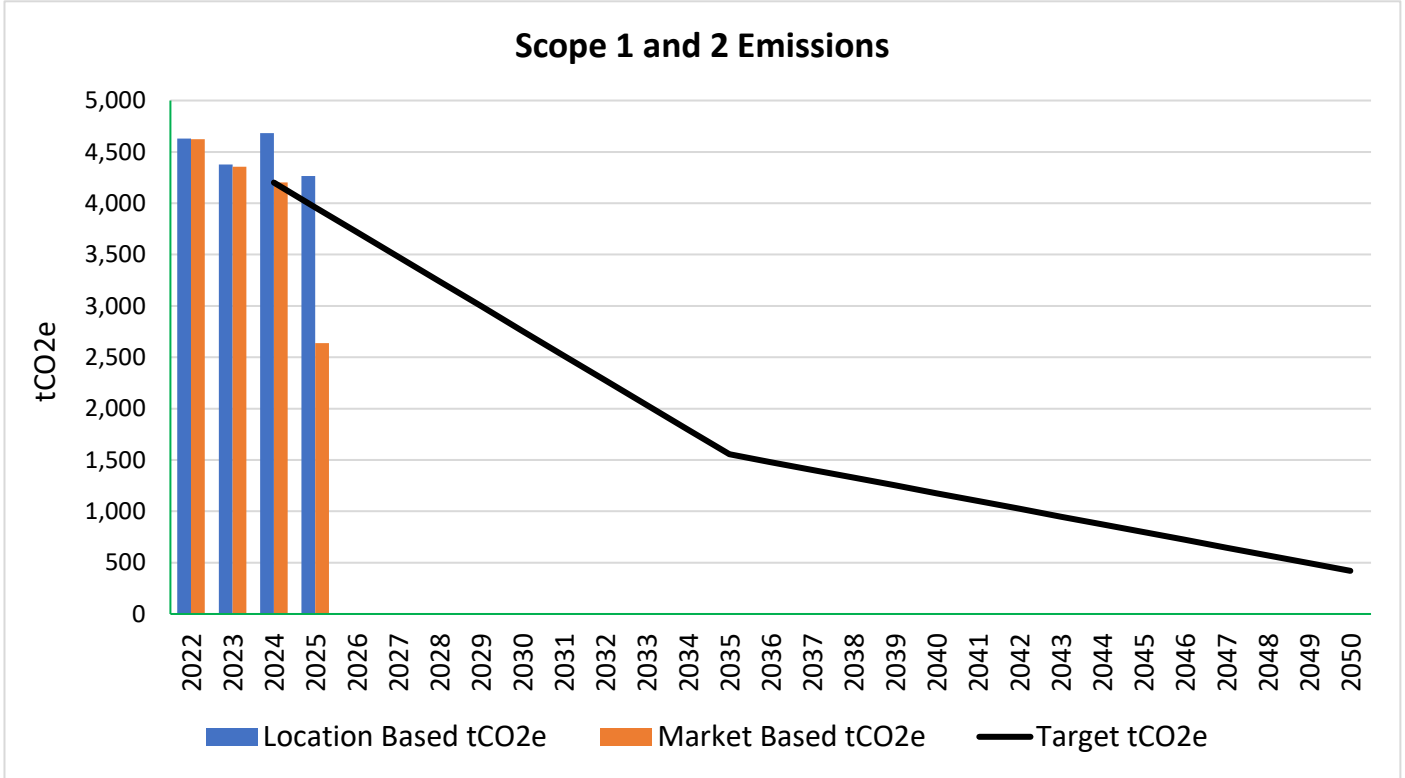

\*The target boundary includes land-related emissions and removals from biogenic feedstocks.

## Emission Reduction Progress

# Numatic International Carbon Reduction Plan

June 2026

## Carbon Reduction Projects

The following environmental management projects have been completed or implemented since the 2022 baseline.

**Scope 1:** We have increased our proportion of electric and hybrid vehicles within our staff fleet from 25% in 2022 to 75% in 2025. Forklifts are currently 60% electric, with a target of reaching 100% electrification by the end of 2026. This transition is expected to reduce emissions by approximately 245 tCO<sub>2</sub>e annually. We also promote energy-efficient behaviour among all colleagues, including guidance on the effective use of heating systems such as thermostatic radiator valves, supported by communication of recent gas consumption data to encourage informed decision-making.

**Scope 2:** We are participants in a Climate Change Agreement with the Environment Agency to improve energy efficiency in our most energy-intensive operations. Improvements include replacing 13 injection moulding machines and 1 rotational moulding machine with more efficient models, work to eliminate compressed air leaks, and fitting barrel jackets for all injection moulding machines. We are also undergoing staff training focussing on energy management and optimisation within the mould shop and regularly communicate best practices across the whole site. In 2025, we constructed a 1.7 MW solar farm, increasing on-site electricity production to 25% of total site demand. This is expected to reduce emissions by approximately 335 tCO<sub>2</sub>e annually and became fully operationally in Q1 2026. All remaining electricity is procured from renewable sources, which is backed by Renewable Energy Guarantee of Origin Certificates. While we prioritise absolute emission reduction, in January 2024, we also started purchasing high-quality carbon offsets to compensate for our residual Scope 1 and 2 emissions.

**Scope 3:** We have been working to reduce our waste, achieving a 40% reduction of non-recyclable waste from 2022 to 2025, through improved recycling facilities, removal of unnecessary general waste bins, and sustained employee engagement. We have also significantly reduced plastic packaging within our products and have replaced over 2 million plastic bags annually with kraft paper, with a further 1 million annually having been removed entirely from the product. We continue to strengthen emission data collection across all Scope 3 categories and are working collaboratively with suppliers to reduce the environmental impact of purchased goods and associated packaging.

## Declaration and Sign-off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors.

Signed on behalf of the Supplier:
